

MIT Libraries Basics

When you search libraries.mit.edu, you can expect:

- The **Books & media** tab is where you can search the [classic Barton catalog](#), a key tool to identify books, print journals and magazines, CDs, DVDs, and other material owned by MIT Libraries.
- From **Books & media** tab, you can also search [MIT's WorldCat](#) to request books from other institutions. [MIT's WorldCat](#) is
 - a “union catalog,” a database of millions of library records from thousands of libraries
 - the closest thing to a search of all existing library materials (e.g., all print books, all print newspaper titles) anywhere
 - a key tool to find material held outside MIT
- The **E-journals & databases** tab links to many e-resources: search by title for e-journals and databases provided by the MIT Libraries. *Do not search for individual articles here.* For example, search for *New York Times*, *Journal of American History*, JSTOR, or Web of Science, open it, and then search for the article you are looking for.
- **BartonPlus** - brings together many library collections in one search interface -- it searches the classic Barton Catalog, as well as most MIT-licensed e-resources like e-books and full-text articles. You can search all of BartonPlus or limit your search to articles and e-resources only.

BartonPlus is new! It offers many benefits and features that you won't find in the classic Barton catalog.

- *Searches millions of records at once across e-resources and the Libraries physical collections, e.g., databases, full text articles, books, theses, music, DVDs, and more.*
- *Offers expanded article searching, with results from many more databases than our previous article finder, Vera Multi-Search.*
- *Features an updated user interface with book cover images, multiple options for limiting search results, relevancy ranking, “did you mean” suggestions for misspelled search terms, and more.*

Note: Although [BartonPlus](#) has extensive coverage of materials available to the MIT community, it does NOT cover all library resources. For an overview of other search options available from the MIT Libraries, see our [Research Guides](#) and [Not sure where to search?](#)

If you want to learn more, check out our [About BartonPlus](#) guide. And, if you have any questions about BartonPlus, please submit them to [questions or comments about BartonPlus](#).

- **Research Guides** list databases by subject and links to other research guides. Use this if you don't know exactly what you need in a specific discipline to what the MIT Libraries suggest.
